

Chondrocyte synchronisation methods vs in vivo tissue diversity

CC: dex/hs/osmo cross-pairs (n=3) | CV: chondrocyte vs in-vivo (n=66) | VV: all in-vivo pairs (n=231)

Mouse, BH.Q < 0.05. Mean fold enrichment: CC=1.05x vs VV=1.39x. FE=1 marks overlap expected by chance.
